Birth of JUDAH

Possible SCENARIO for JUDAH Genesis 38

JACOB'S sons —— he served LABAN 20 years —— from age 77 to 97 (see chart 2)
Gen 29,30 Gen 31:41

7 years for LEAH — 7 years for RACHEL — 6 years for cattle

1759 BC — 4 yrs — c.1755 BC — 3 yrs — 1752 BC — 1748 BC — 1745 BC — 1739 BC

REUBEN, SIMEON, LEVI, JUDAH Born — LEAH'S 1st four sons

JUDAH born? (NO !)

JOSEPH — RACHEL'S SONS — BENJAMIN

Born at the end of the 14 years JACOB worked for his wives Gen 30:24-26

Born at the end of the 20 years on the way back to ISAAC in Hebron. RACHEL dies in c4B3rd/h Gen 35:16-27 (or possibly 1732 BC)

Jacob took his wives, Leah and Rachel, almost immediately upon coming to his uncle Laban's in Paden-aram (Gen 29:18-30). Jacob could have been after first working and waiting for 7 years that the marriage contract was fulfilled for the following 4 reasons:

1. Jacob did not say "Give me my wife, for my ***years*** are fulfilled." He said "for my ***days*** are fulfilled" (Gen.29:21). This implies a certain number of days from the time the contract was made until he could claim his wife. Jacob's use of the word "days" implies that the 7 years had been mutually understood by both parties. The 7 years (v.18) of service were the total divorcy and not the customary waiting period. The "few days" of Gen.29:20 could have been the month of verse 14 and the contract could have been made at the beginning of these 30 days. Verse 15 implies that Jacob had already been working or "serving" Laban in order to earn his keep.
2. Jacob actually received both wives within a week of each other (vs.27-30). He was told that if he would "fulfill her (Leah's) week" (v.27) Rachel would then be given to him. Verse 28 declares: "And Jacob did so, and fulfilled her week: and he gave him Rachel his daughter to wife also." As it may be proved that Leah became his wife at the beginning of the total 14 year divorcy period (See reasons #3 and #4.), then Rachel had to have also become his wife at that time.
3. It is not feasible that Jacob obtained Leah (and Rachel a week later) at the ***end*** of the first 7 year period because that would not allow enough time for all the children to be born. Joseph was the last son of Jacob born before the return to Canaan and was born at the end of the 14 year divorcy period. At his birth and having fully paid for Rachel (Gen.30:24-26), Jacob desired to return to Canaan but Laban persuaded him to remain 6 more years (for the cattle, Gen.30:24-28; 31:41). Thus all the other children had to be born in either a 7 year span or a 14 year span (except Benjamin who was born of Rachel near Bethlehem on the return just before coming to Isaac at Hebron, Gen.35:16-20, 27).

   Now Leah had 6 sons and a daughter ***before*** Joseph was born (30:20-24). Furthermore, there was a period when she "left (off) bearing" after having birthed 4 sons (29:35; 30:9). During this interval of barrenness, she gave Zilpah, her handmaid, to Jacob that she might have more children through her. As Zilpah bore 2 sons ***before*** Leah herself began to bear again, the childless interval had to have been close to a minimum of 2 years. Thus, it is not possible that Leah could have had 7 single terms and an approximately 2 year unfruitful interval in only 7 years. Moreover, according to Bible custom and practice making this even less conceivable. Therefore Jacob received his wives at the ***beginning*** of the entire 14 year divorcy period.
4. As alluded to earlier, Judah could not have been born in the second 7 year period because the events relating to his life recorded in Gen.38 require more time than that would allow. This episode occurs before Judah's family came to live in Hebron. Judah's father, Jacob, was living in Hebron when he was visited by his father, Isaac, in the year 1706 BC and he was 130 years old when he and his family came into Egypt (Gen.47:9). Thus the family only dwelt in Canaan 33 years (130 -97 = 33, See Chart 3c.) during which time Judah married a Canaanitess, the daughter of Shuah of Adullam. They began a son named Er who married Tamar. The LORD slew Er and his younger brother, Onan, wed Tamar.

   After God also slew Onan for his wickedness, Judah refused to let his youngest son, Shelah, marry Tamar. Later, after Judah's wife had died, Tamar disguised herself as a harlot and seduced her father-in-law, Judah, to the intent that she might give birth to a son in order to "raise up seed" to Er (Gen.38:8; cp. Deu.53-10). She gave birth to twins and at the time that Jacob and his clan followed Joseph into Egypt they were of sufficient age that one of them, Perez (Pharez), was married and had 2 sons (Gen.46:12).

   Judah was Jacob and Leah's 4th son (Gen.29:31-35). Chart 3d depicts the 20 years that Jacob spent with Laban in which he worked 14 years for his two wives and 6 years for his cattle (Gen.31:41) and it exhibits two possible scenarios for the birth year of Judah. Chart 3f portrays both possibilities for comparison.

   The upper scenario reflects the difficulty of compressing the account of Judah's family given in Genesis 38 into the Biblically required 33 year span, even when the maximum conditions that make use of Judah's being born in the first 7 year period are considered. This scenario assumes that Jacob took his wives at the beginning of the 14 year divorcy period, that Judah married at the minimum allowable age of 16 years, that the events of Gen.38 requires 4 generations (Judah, Er, Perez and his 2 sons) be born in only 49 years, i.e., Judah's birth in B.C. 1755 (Chart 3c) minus 1706, the Year the family entered Egypt (Charts Two and 3c). This could permit Judah to be about 1 or less when his father took him to Canaan whereupon he was sold, fathered by age 17 so that Er, Onan and Perez (Pharez) could have been around 14 to 15 years old when born.

   However, if we try to place the time of Judah's birth in the second 7 year period, we lose 7 years, forcing all these births and marriages into only a 42 year term (1748-1707 = 42) as displayed in the bottom scenario of Chart 3f. This would place Judah's birth at approximately 1748 BC and would place the birth of Joseph, the son of Er and Onan became grandfathers young (ca.11 or 12) to promote or to incur the judgment that fell upon them. Moreover, it is difficult to imagine God as describing boys of 12 and 11 years as "wicked".

   Therefore, in view of the above four considerations one must conclude that Jacob took his wives at the beginning of the entire 14 year divorcy period, working for Laban to pay off the divorcy while living with both Leah and Rachel. How else could it be said of a love smitten suitor that the time "seemed unto him (Jacob) but a few days" (Gen.29:20)? Yet there is still more confirming evidence.
5. Dinah's age is a restricting factor with regard to when Jacob obtained his wives (See Chart 3f). Dinah their sojourn at Shechem. Dinah (Jacob's daughter by Leah) "went out to see the daughters of the land" (Genesis 34) at which time Shechem the Hivite, son of the prince, raped her. Jacob had gone to Laban in B.C. 1759 and remained for 20 years (v.41) and left after the birth of his 11th son, Joseph, who was born in 1745 BC (Gen.30:24-26; cp. 29:18-20). Dinah was born before Joseph (Gen.30:19-26). Jacob had passed significant time in both Succoth, where he built a house, and Shechem where he had bought "a parcel of a field". Upon his return, his sons were referred to as "tender children" (Gen.33:2-13) whereas at the time of the rape they were called "men" (Gen.34:7; 21, 22, 25).

   Later while living in Hebron with Isaac, Joseph's brothers sold the 17 year old into slavery in 1728 B.C. (Gen.37:2, 28, 36; cp. 35:27). This and Joseph's birth date places restrictions on Dinah's age at the time of her defiling. As she was Leah's youngest and since the rape took place before Joseph's 17th year, Jacob could not have waited 7 years until B.C. 1752 (1759 - 7 = 1752) before he received his wives for Dinah could not feasibly be born during the first 7 year span as demonstrated in point three. Even in the extreme unlikelihood of this having happened, at best her birth would have had to have been in the same year as that of Joseph's (1745). Such a scenario would place her age around 13. Too young to fit the context of the incident; so young a maiden would hardly go unescorted among the ungodly in that day. The additional seven years brings her age much more in line with the story.

* NOTE:

Ussher published in 1650 AD and his dates were added to the margin of the KJB in 1701 when the Church of England had Bishop Lloyd edit for spelling and typesetting errors. Lloyd used most of Usher's dates, but changed some to fit his thinking. Hence, the dates are also commonly referred to as "Ussher's" or are often Lloyd's.

Ussar gives no dates for DINAH; otherwise, he and Jones agree on all the upper dates. Those in parenthesis, are actually Lloyd's (designated Ussher-Lloyd). See "Annals of the World", 2004 ed., pp. 29-31 (1658 ed., pp. 8-10).

Possible SCENARIO for JUDAH Genesis 38

Showing why JACOB had to have received his wives very soon after his arrival at LABAN'S

WHICH ?

This scenario shows the math requirements necessary for JACOB if he had to work 7 years ***before*** he received a wife. The time passed quickly - Gen 29:20 because he had received both wives soon after he made the covenant with LABAN (ie: Gen 29:21 "days", not years, are fulfilled). This statement could not have been made if JACOB had to first work 7 years without RACHEL.
